

**IN THE CLAIMS**

The text of all pending claims, (including withdrawn claims) are set forth below. Cancelled and not entered claims are indicated with claim number and status only. The claims as listed below show added text with underlining and deleted text with ~~strikethrough~~. The status of each claim is indicated with one of (original), (currently amended), (cancelled), (withdrawn), (new), (previously presented), or (not entered).

Please **CANCEL** claims 2, 3, 5 and 6.

Please **AMEND** claims 1, 4, and 7-9 as follows.

1. (CURRENTLY AMENDED) An electronic multimedia object management apparatus in communication with network devices and managing electronic multimedia objects used/produced by the network devices when performing jobs in an enterprise, comprising: ~~by being connected to an information management device maintaining~~

a master enterprise attribute information for storage storing a plurality types of enterprise attribute information included in said electronic multimedia objects through a communication network, the relating to manage distribution targets of each electronic multimedia object for the jobs, the enterprise attribute information comprise as information on organizations of the enterprise information on at least a corporate organization code and a corporate organization name; ~~said apparatus comprising:~~

a master enterprise job information storage storing job information of the organizations of the enterprise;

an electronic multimedia object storage section storing said job electronic multimedia objects that include the plurality types of enterprise attribute information;

~~a communication section acquiring information from a device connected to said communication network;~~

a determination section managing the distribution targets of the job electronic multimedia objects by determining, according to a predetermined cycle, for each job electronic multimedia object stored in said electronic multimedia object storage section, by reading out the master attribute information maintained by said information management device through said communication section, whether the plurality types of enterprise attribute information included in the job electronic multimedia object and/or an enterprise organization target job to which the job electronic multimedia object belongs conflicts with the master enterprise attribute information and/or conflicts with the master enterprise job information, respectively, if a combination of the at

6 ( least corporate organization code and the at least corporate organization name of the master enterprise attribute information does not coincide with the enterprise attribute information included in the job electronic multimedia object and/or the enterprise organization target job to which the job electronic multimedia object belongs does not coincide with job information of a corresponding organization of the enterprise in the mater enterprise job information to manage the distribution targets of the electronic multimedia objects; and

a rewriting section rewriting any of the plurality types of enterprise attribute information included in the job electronic multimedia object when said determination section determines that ~~the plurality types of attribute information conflicts with the master attribute information~~ a conflict.

2. (CANCELLED)

3. (CANCELLED)

4. (CURRENTLY AMENDED) ~~An~~ The electronic multimedia object management apparatus according to claim 1 further comprising an electronic mail outputting section outputting, when ~~an~~ the job electronic multimedia object is rewritten, an electronic mail to notify changing of the plurality types of enterprise attribute information in the job electronic multimedia object to each ~~department~~ enterprise organization identified by the plurality types of enterprise attribute information included in the rewritten job electronic multimedia object.

5. (CANCELLED)

6. (CANCELLED)

7. (CURRENTLY AMENDED) A computer-readable recording medium with a computer program recorded therein causing a computer having a communication section function as an electronic multimedia object management apparatus that is in communication with network devices and manages ~~managing~~ electronic multimedia objects used/produced when performing jobs in an enterprise according to a process comprising:

~~by being connected to an information management device maintaining master enterprise attribute information for a plurality types of enterprise attribute information included in said electronic multimedia objects through a communication network, the attribute information relating to manage~~ distribution targets of each electronic multimedia object for the jobs, said apparatus ~~comprising the enterprise attribute information comprise as information on organizations of the enterprise information on at least a corporate organization code and a corporate name;~~

~~maintaining a master enterprise job information for the organizations of the enterprise; an electronic multimedia object storage section storing said job electronic multimedia objects that include the plurality types of enterprise attribute information;~~

~~a determination section managing the distribution targets of the job electronic multimedia objects by determining, according to a predetermined cycle, for each stored job electronic multimedia object stored in said electronic multimedia object storage section by reading out the master attribute information maintained by said information management device through said communication section, whether the plurality types of enterprise attribute information included in the job electronic multimedia object and/or an enterprise organization target job to which the job electronic multimedia object belongs conflicts with the master enterprise attribute information and/or conflicts with the master enterprise job information, respectively, if a combination of the at least corporate organization code and the at least corporate organization name of the master enterprise attribute information does not coincide with the enterprise attribute information included in the job electronic multimedia object and/or the enterprise organization target job to which the job electronic multimedia object belongs does not coincide with job information of a corresponding organization of the enterprise in the master enterprise job information to manage the distribution targets of the electronic multimedia objects; and~~

~~a rewriting section rewriting any of the plurality types of enterprise attribute information included in the job electronic multimedia object when said determination section managing of the distribution targets determines a conflict that the plurality types of attribute information conflicts with the master attribute information.~~

8. (CURRENTLY AMENDED) A computer system in communication with an ~~information management system~~ network devices and managing electronic multimedia object ~~distribution objects used/produced by the network devices when performing jobs in an~~ enterprise, comprising:

a master enterprise attribute information storage that stores a plurality types of enterprise attribute information to manage distribution targets of each electronic multimedia object for the jobs, the enterprise attribute information comprising, as information on organizations of the enterprise, information on at least a corporate organization code and a corporate organization name;

a master enterprise job information storage storing job information of the organizations of the enterprise;

a programmed computer processor controlling the computer system according to a process comprising:

storing in a storage unit the job electronic multimedia objects and that include the plurality types of job enterprise attribute information of the electronic multimedia objects to manage distribution targets of the electronic multimedia objects,

retrieving master job attribute information of the electronic multimedia objects from the information management system, determining managing the distribution targets of the job electronic multimedia objects by determining, according to a predetermine cycle, for each stored job electronic multimedia object, whether the plurality types of job enterprise attribute information of each job electronic multimedia object and/or an enterprise organization target job to which the job electronic multimedia object belongs conflicts with the master job enterprise attribute information and/or conflicts with the master enterprise job information, respectively, if a combination of the at least corporate organization code and the at least corporate organization name of the master enterprise attribute information does not coincide with the enterprise attribute information included in the job electronic multimedia object and/or the enterprise organization target job to which the job electronic multimedia object belongs does not coincide with job information of a corresponding organization of the enterprise in the mater enterprise job information, and

updating the plurality types of job enterprise attribute information of each job electronic multimedia object, if the managing of the distribution targets determines a conflict when determined that the plurality types of job attribute information of each electronic multimedia object conflicts with the master job attribute information.

9. (CURRENTLY AMENDED) A system to manage electronic multimedia objects used/produced when performing jobs in an enterprise, comprising:

servers connected to a network and storing master enterprise attribute information relating to distribution targets of each electronic multimedia object for the jobs, in which the enterprise attribute information comprises, as information on organizations of the enterprise, information on at least a corporate organization code and a corporate organization name, to be performed and storing master enterprise job information of the organizations of the enterprise; and

a computer processor in communication with the servers via the network and having a programmed computer processor controlling the computer according to a process, comprising:

9 (C) storing in a storage unit the job electronic multimedia objects ~~used/produced when performing the jobs and storing~~ that include the plurality types of enterprise attribute information of the electronic multimedia objects to manage distribution targets of the electronic multimedia objects,

retrieving the master attribute information of the electronic multimedia objects from the servers managing the distribution targets of the job electronic multimedia objects by determining, according to a predetermine cycle, for each stored job electronic multimedia object, whether the plurality types of enterprise attribute information of each job electronic multimedia object and/or an enterprise organization target job to which the job electronic multimedia object belongs conflicts with the master enterprise attribute information and/or conflicts with the master enterprise job information, respectively, if a combination of the at least corporate organization code and the at least corporate organization name of the master enterprise attribute information does not coincide with the enterprise attribute information included in the job electronic multimedia object and/or the enterprise organization target job to which the job electronic multimedia object belongs does not coincide with job information of a corresponding organization of the enterprise in the mater enterprise job information, and

updating the plurality types of enterprise attribute information of each job electronic multimedia object responsive to a conflict by the managing of the distribution targets between the plurality types of attribute information of each electronic multimedia object and the master attribute information.
